A screenshot of a Windows operating system interface. The main part of the image is a black terminal window with white text. The terminal shows a series of Linux commands being entered and executed, with line numbers 46 through 68. The commands include file listing (ll), file permission changes (chmod), package installation (yum), user creation (useradd), switching users (su), password checking (pwd), file creation (touch), directory creation (mkdir), file content viewing (cat), and command location finding (which). The terminal window has a title bar with standard Windows window controls. Below the terminal window is the Windows taskbar, which is blue and contains several icons: the Start button, Search, Task View, and several application icons including File Explorer, Microsoft Edge, and others. On the right side of the taskbar, there are system icons for network, volume, and battery, along with the date and time: 01:54 PM, 29-06-2022.
